

cmake,emscripten and c++17

MARKDOWN Trying to compile my c++17 based project (using entt) makes problems with using my urho3d-docker-web-image that uses emscripten for compilation to web. `` emcc (Emscripten gcc/clang-like replacement) 1.39.8 ((unknown revision)) `` Using (I'm mainly using gcc for compilation, android uses clang afaik?) `` target_compile_features(\${PROJECT_NAME} PUBLIC cxx_std_17) `` leads to an error like that: `` CMake Error at CMakeLists.txt:95 (target_compile_features): target_compile_features no known features for CXX compiler "Clang" version 1.39.8. `` I tried a couple of approaches, but the only one that worked for me was a 'brutal' add_definitions(..) `` add_definitions(-std=c++1z -std=gnu++1z) `` I didn't dig too deep into the problem...but for now it works... ;)
